

- Tennessee has one of the nation's highest overdose rates, yet clinical, policy, and surveillance information is scattered across hard-to-access silos
- Clinicians and public health workers cannot easily find grounded, evidence-based answers about OUD treatment, guidelines, or local conditions
- No existing system unifies clinical guidelines, research literature, state surveillance data, and Tennessee-specific policy in one searchable platform

DOCUMENT DATABASE

OAD Medications

Clinical Guidelines

TN Surveillance

Behavioral Treatment

Neuroscience

Co-occurring Conditions

Health Equity

Harm Reduction

Policy & Law

AI in Addiction Medicine

PRISMA screening protocol — every document traced, categorized, and metadata-tagged with source, page, and topic.

EXPECTED CONTRIBUTIONS

BROADER IMPACTS

- Clinicians and public health workers gain plain-language, evidence-grounded OUD answers without searching multiple databases
- UTK Institute for Public Service partnership grounds outputs in real practitioner needs
- Graduate researcher trained in full research arc: curation, AI design, evaluation, and scientific writing
- Aligned to NH HEAL Initiative Goal 2-2 and CMS Rural Health Transformation
