Companion Infographic Report: Findings from the 2024 National Substance Use and Mental Health Survey

Executive Summary

The Companion Infographic Report: Findings from the 2024 National Substance Use and Mental Health Services Survey (N-SUMHSS) is a compliment to the 2024 N-SUMHSS Annual Report.¹ This report highlights selected key characteristics and findings of 15,953 substance use (SU) treatment facilities, 14,091 mental health (MH) treatment facilities, and 8,839 combined SU and MH treatment facilities.^{2,3}

In 2024, SU treatment facilities, MH treatment facilities, and combined SU and MH treatment facilities were predominantly operated by private organizations and provided outpatient services. Almost all of SU treatment facilities and MH treatment facilities were either licensed, certified, or accredited by an agency and/or organization. More than half of the SU treatment facilities offered medications for opioid use disorder (MOUD)⁴ and half of the SU treatment facilities offered medications for alcohol use disorder (MAUD).⁵ More than half of SU, MH, and combined SU and MH treatment facilities offered suicide prevention services.

Introduction

The Substance Abuse and Mental Health Services Administration (SAMHSA) presents the Companion Infographic Report: Findings from the 2024 National Substance Use and Mental Health Services Survey (N-SUMHSS). This infographic provides a summary of selected key characteristics, which were collected from 21,205 treatment facilities (15,953 SU treatment facilities, 14,091 MH treatment facilities, and 8,839 combined SU and MH treatment facilities) across the United States, the District of Columbia, and U.S. territories.^{2,6} This report highlights SU and MH treatment facilities' type of operation, type of care, facilities' licensing, certification, or accreditation, and geographic distributions of facilities offering MOUD⁴, MAUD⁵, and suicide prevention services.

This infographic accompanies the more comprehensive N-SUMHSS Annual Report,¹ together they provide an at-a-glance and an in-depth understanding of the SU and MH treatment landscape, identify service gaps, and support evidence-based planning by behavioral health services providers, researchers, and federal, state, and local governments.

Survey Background

SAMHSA has been collecting data on SU and MH services offered by treatment facilities in the U.S. for more than two decades. Initially, this was done using two surveys, the National Survey of Substance Abuse Treatment Services (N-SSATS) and the National Mental Health Services Survey (N-MHSS). In 2021, the surveys were combined into one, N-SUMHSS, to make it a comprehensive national source of data on SU and MH treatment facilities. The N-SUMHSS collects data annually on the location, characteristics, and utilization of SU and MH treatment facilities. The data collected provide a mechanism to quantify the diverse characteristics and composition of SU and MH treatment delivery systems nationwide.

Data Collection and Methodology

The 2024 N-SUMHSS was conducted using a multimode data collection approach that included: (1) a secure web-based survey, (2) a postal paper survey, and (3) computer-assisted telephone interviews (CATI). The survey was administered in both English and Spanish. Of the 27,957 treatment facilities known to SAMHSA in 2024, 23,948 were deemed eligible to participate in the survey. Among these, 21,205 facilities completed the survey,³ yielding a robust overall response rate of 90.4%.⁷

Facilities were categorized as providing SU treatment, MH treatment, or both SU and MH treatment. Because many facilities offer multiple types of services, facility counts and percentages are not mutually exclusive.² The information in this infographic only includes descriptive analysis and therefore no inferential analysis was conducted.

For more survey details, eligibility determination, response rate calculation (including use of the AAPOR Response Rate 4 definition), and dissemination methods, please refer to the Survey Products and Dissemination section in Appendix B of the full 2024 N-SUMHSS Annual Report.¹

Type of treatment offered

Percentage of mental health treatment facilities offering suicide prevention services

- Below 60%
- Above 60%

In **40** states or territories, over 80% of combined substance use and mental health treatment facilities offered suicide prevention services

Percentage of combined substance use and mental health treatment facilities offering suicide prevention services

- Below 80%
- Above 80%

Endnotes

1. The 2024 N-SUMHSS Annual Report can be found here: [Key Resources and Tools for N-SUMHSS | CBHSQ Data](#)
2. Facility counts and percentages are not mutually exclusive because facilities offering both SU and MH treatment services are included in SU and MH facility counts. Since the overall facility counts vary (i.e., SU = 15,953, MH = 14,091, and SU/MH = 8,839), readers should use both counts and percentages when interpreting the findings on SU, MH, and SU/MH facility characteristics. Caution should be exercised when adding, comparing, and interpreting findings across facility types.
3. A total of 21,205 unique facilities were included in this report: facilities providing only SU treatment services = $15,953 - 8,839 = 7,114$; facilities providing only MH treatment services = $14,091 - 8,839 = 5,252$; and facilities providing both SU and MH treatment facilities = 8,839.
4. Includes facilities that report providing methadone, buprenorphine, or injectable naltrexone for OUD. Methadone is only available at opioid treatment programs (OTPs) certified by SAMHSA's Center for Substance Abuse Treatment (CSAT). Excludes facilities that report accepting clients using MOUD prescribed by another facility.
5. Includes facilities that report providing disulfiram, naltrexone, or acamprosate for AUD. Excludes facilities that report accepting clients using MAUD prescribed by another facility.
6. The 2024 N-SUMHSS was a voluntary facility survey that collected data from SU and MH treatment facilities across 50 states, seven territories, and the District of Columbia. The territories included American Samoa (AS), the Commonwealth of the Northern Mariana Islands (MP), the Federated States of Micronesia (FM), Guam (GU), the Republic of Palau (PW), Puerto Rico (PR), and the U.S. Virgin Islands (VI). In 2024, AS, FM, and PW did not have any eligible facilities.
7. The American Association for Public Opinion Research (AAPOR) Response Rate 4 (RR4) is the proportion of completed and partially completed surveys divided by the total number of eligible cases in the sample. The total number of eligible cases is comprised of completes and partials, as well as eligible, non-completed surveys and estimated eligible non-respondents. For more details on the 2024 N-SUMHSS response rate calculations, please refer to the [2024 N-SUMHSS Annual Report, Appendix B](#).
